

## National Livestock Reporting Service

# National Restocker Lamb Indicator

The National Restocker Lamb Indicator is a seven-day rolling average of lambs purchased by restockers or feeders from NLRS reported saleyards across Australia. It is expressed in cents per kilogram carcase (or dressed) weight (¢/kg cwt) and is rounded to two decimal points.

### What is a seven-day rolling average?

At any point in time, a seven-day rolling average includes data from the past seven calendar days. In the case of the National Restocker Lamb Indicator, the dataset takes the average ¢/kg cwt of an animal matching the specifications of the Indicator per day for the past week, adds them up and divides the figure by seven. This figure is updated daily to create a rolling average value for this specification of animal.

## National Restocker Lamb Indicator composition

The National Restocker Lamb Indicator includes lambs up to 12 months of age purchased by restockers and feeders with all fat scores and carcase weights from 0–22kg (Table 1). The sales included in the National Restocker Lamb Indicator are outlined in Table 2.

**Table 1: Lamb categories in the National Restocker Lamb Indicator**

Classification	Carcase weight (kg)	Sales prefix <sup>+</sup>
Young lamb	0–22	FD RM RS
Lamb	0–22	FD RM RS

**Table 2: Prime sales in the National Restocker Lamb Indicator**

Monday		Tuesday		Wednesday		Thursday		Friday	
Corowa	NSW	Deniliquin*	NSW	Cowra	NSW	Wagga	NSW	Griffith	NSW
Dubbo	NSW	Forbes	NSW	Guyra*	NSW	Swan Hill*	Vic		
TRLX Tamworth	NSW	IRLX Inverell*	NSW	SELX Yass	NSW				
Bendigo	VIC	Powranna	TAS	CTLX Carcoar	NSW				
		CVLX Ballarat	VIC	Cootamundra	NSW

		Muchea	WA	Katanning	WA				
				Warwick	QLD				

<sup>+</sup> RS – Restocker purchased, FD – Feeder purchased, RM – Restocker Merino purchased.

\* Fortnightly.

## How is the National Restocker Lamb Indicator calculated?

The National Restocker Lamb Indicator is the average price of lambs meeting the Indicator specifications for the past seven calendar days. It is calculated as follows, using the average live weight price (\$/head), skin value (\$/head) and estimated carcase weight (cwt):

- 1 The cwt price for each pen is calculated.

$$\text{cwt price (¢/kg)} = (\text{live weight price} - \text{skin value}) \div \text{cwt (kg)}$$

- 2 The average price for each pen is weighted by the number of head in the pens. This is done by calculating the pen value

$$\text{Pen value} = \text{cwt price} \times \text{head in pen}$$

- 3 The National Restocker Lamb Indicator value (¢/kg cwt) is obtained by dividing the sum of all pen values by the total number of lambs meeting the Indicator specifications and rounding to two decimal points.

$$\text{National Restocker Lamb Indicator} = \frac{\text{Sum of all pen values}}{\text{Total head in National Restocker Lamb Indicator}}$$

## The purpose of the National Restocker Lamb Indicator

The National Restocker Lamb Indicator is designed to be applicable to industry participants across the supply chain. It describes what buyers are paying for lambs out of the saleyard. Movements in the National Restocker Lamb Indicator follow the general trends of other MLA indicators, such as the National Light Lamb Indicator. That is to be expected given many of the Australian and global factors that influence supply and demand have an impact across multiple lamb categories.

### Expected performance

Since 2017, the average breakdown for the total share of eligible restocker lambs has consisted of 78% restocker and 22% feeder lambs. For the same period, the average weight of restocker lambs has been 15.9kg, made up of lambs (51%) and young lambs (49%). Typically, young lambs are those under five months of age, often unweaned or sucker lambs and with no permanent teeth. The throughput of restocker lambs through the saleyards is largely dependent on seasonal conditions and the time of year.

### Price movements

It is important to note that price movements in individual saleyards and livestock categories are likely to be much more volatile than the National Restocker Lamb Indicator, while still subject to the same underlying price trends.
