

BOWAN PARK
POLL DORSET RESEARCH FLOCK

The Genetics of Profitable Lamb Production

5 years of Bowan Park Poll Dorset progeny trial data

Genetics determine what is possible; nutrition and management make it happen.

How do we prove which genetics grow fast? Or yield better? Or have superior eating quality?

Join us on **Friday 28th March**, as we look at 5 years of on-farm and carcase performance testing results, considering how specific genetic traits have a greater or lesser impact on the profitability of farm production systems.

Isabele Roberts *Bowan Park Trial Coordinator and Weekly Times/Coles 2023 Sheep Farmer of the Year* will present the results including:

- A benchmark of performance across all prime lamb production traits
- Meeting the genetic priorities for profitability in current and future prime lamb production
- ASBVs – finding the optimal balance between traits.

Our industry speakers will explore topics that unpack the genetic priorities for profitability in current and future lamb production.

- **Dr Peter McGilchrist** *UNE Meat Science*
- **Ellie Hays** *Agrista Farm Benchmarking*
- **Dr Michelle Henry** *Gundagai Lamb*
- **Rob Lindon** *TA Field (on farm manager 'Aberfeldy' - prime lamb production)*
